

Plots treated Feb 5, 2014

All plots treated with glyphosate and SHARK (carfentrazone) during winter.

All plots swept with sweeper and then back through with rakes before treatment to remove leaves.

All treatments except UTC contain 1 qt Roundup weather Max and 0.25% v/v AMSPro.

Treatments made at 30GPA.

All plots 15 ft long and 3 ft wide on either side of vinerow for 90 sq feet.

Treatments were made with a CO2 backpack sprayer with 2 8002 nozzles each delivering 700mls/minute.

No weeds were present at time of treatment.

Rain amounts after treatment

5-Feb 0.21 inches

6-Feb 0.57 inches

7-Feb 1.33 inches

8-Feb 2.13 inches

9-Feb 1.16 inches

Total rain after treatment: 8.85 inches
