Bose-make certain she is current

CD&T or Covexin 8

Worm-(No Valbazen this can cause birth defects) based

Worm Doe

Bucks/Wethers:

daily mixed in feed

medication

If your feed does not contain Ammonium Chloride

Ammonium Chloride- be careful not to overdose this

1/4 tsp. per 10 lbs body weight

Some herds will in addition to the above vaccination schedule need to consider giving J-5, E-Coli, and Leptospirosis. Check with your Veterinarian as to the dose and necessity of these vaccines.

Coccidia Treatment/Prevention Dosage: Coccidia treatment and frequent worming of your goats may not be required. The only way to be certain of your individual animals requirements is to have a fecal exam performed on each animal.
